

WrightTRAK Railroad Models is proud to announce the production of their latest HO scale cast resin freight car kit, a Southern Railway pulpwood car. These cars, rebuilt from obsolete boxcars, feature the dreadnought ends of the donor cars. Rebuilt in 1951 a few examples of these cars remained in service into the 1980's. This kit can also represent a class of pulpwood cars owned by the Chesapeake and Ohio as well.

Available featuring either as built Roman lettering or the later Block lettering, these cars would be right at home on any Southeastern based layout. The kits feature the usual WrightTRAK quality one piece body with Tichy AB brake details as well as trucks and plastic wheelsets. Couplers are not included. Appropriate detail parts to complete the car are also included.

Priced at \$39.95 they are available through our website at [www.wrighttrak.com](http://www.wrighttrak.com) or by mail from WrightTRAK Railroad Models at P O Box 158, Clarkesville, GA 30523
